# SeizureSafe™ Documentation & Observation Kit

Practical Tools for Recognizing and Documenting Seizure Activity in Dementia Care

*Part of the SeizureSafe System*

## Included

Seizure Documentation Best Practices Guide

Seizure Observation Checklist

**Introduction**

The SeizureSafe™ Documentation & Observation Kit is one component of the broader SeizureSafe™ system—an operational framework designed to help senior living communities proactively recognize, respond to, and document seizure activity in residents with dementia. While this kit focuses on improving observation and reporting, SeizureSafe also provides staff education modules, response protocols, and ongoing compliance tools to reduce seizure-related risks.

This kit combines two essential tools:

- **Seizure Observation Checklist**: A structured, easy-to-use form for capturing critical details before, during, and after a suspected seizure.

- **Seizure Documentation Best Practices Guide:** A concise reference for writing clear, objective notes that support accurate clinical follow-up and compliance.

Use this kit as a practical, standalone resource or as an entry point into the SeizureSafe™ Hub. Encourage staff to complete the checklist immediately after an event and refer to the guide to ensure thorough and professional documentation. Together, these tools support better outcomes, stronger compliance, and safer environments for residents.
